

SMICON *depacking* in week 7 & 8 this year:

As you probably know we have several solutions for processing packed and unpacked waste foodstuff (see also the enclosed leaflet).

During week 7 & 8 we offer you the possibility to test this with your own product at our plant in Wanroij, the Netherlands:

With the SMIDE6-MD shredder we reduce the packed foodstuff, after that the SEPAmatic belt press separates the packing materials. If you want to test your own product or you want to see a test call you contact person or ask for the sales department.
